

# Arch modeling diagram

## General parameters

`clearSpanWidth` must be double of `riseHeight` to obtain a full circumference. `topAbutmentHeight=0` means no topAbutment; `pierWidth=0` means no pierWidth; `pierHeight=0` means no pierHeight

## intradosOnly = true

Modify `clearSpanWidth`, `riseHeight`, `depth` at purpose. Note it is a flat curved surface. If needed apply `archHalf=true`.

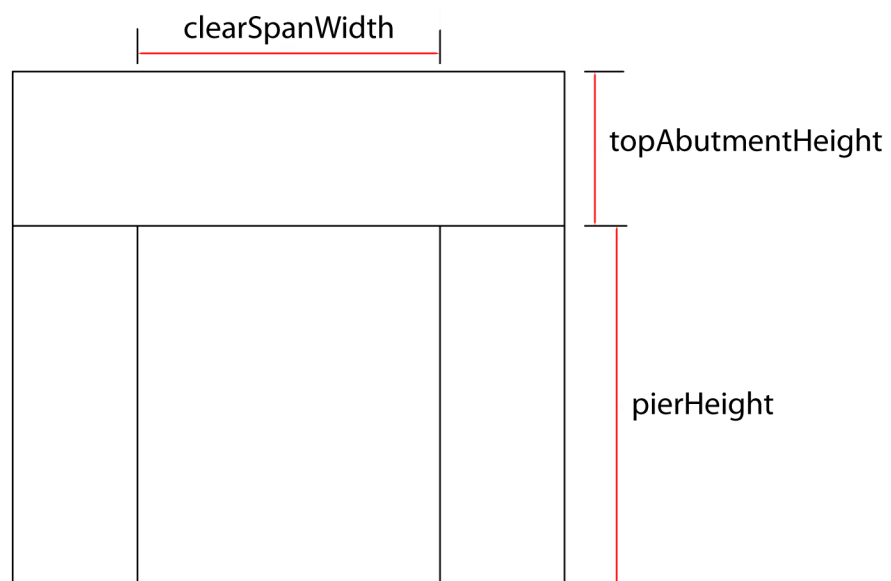

## archFilled = true

Modify `clearSpanWidth`, `riseHeight`, `depth` at purpose. Note it is an half cylinder.

## halfArchFilled = true

Modify `clearSpanWidth`, `riseHeight`, `depth` at purpose. Note it is a quarter cylinder.

## lintel = true

Modify `clearSpanWidth`, `depth`, `topAbutmentHeight`, `pierWidth`, `pierHeight`, at purpose. If needed apply `archHalf=true`.
